3RD-PARTY DEPENDENCIES

2

REMOVAL CANDIDATES

Executive Summary: The IRIS V2.0.0 codebase is a hybrid architecture combining a legacy Plain PHP application and an integrated browser-based document scanner workspace (IRIS-7). Per team directive, paid external API dependencies like **Anthropic Claude API** and unused CDN scripts like **Chart.js** are designated for removal. The application will rely on the free home-grown rule-based module (`smart_map_csv()`) and client-side browser JS parsing (SheetJS, PDF.js, Mammoth, Tesseract.js).

Team Directive — Free Stack Migration: Paid Claude API calls (`includes/ai_extract.php`) are marked for removal. Ingestion transitions 100% to the free home-grown rule-based CSV/Excel mapper and browser-side JS scanner workspace.

Category 1: Dead & Deprecated Code

#	LOCATION	ITEM	ISSUE & EVIDENCE	CONF.	RECOMMENDED ACTION	RISK
1	<code>includes/ai_extract.php:1-15</code>	Claude API Module	Paid API service. Team directive specifies 100% free stack only. cURL call to <code>api.anthropic.com</code> .	HIGH	Remove module file and switch to local rule-based CSV/Excel mapper.	LOW
2	<code>includes/functions.php:13</code>	<code>function old()</code>	Defined but 0 call sites across views/templates.	HIGH	Remove unused helper function.	LOW
3	<code>includes/ai_extract.php:13</code>	<code>function ai_requirements()</code>	Defined but never invoked. Re-implemented inline in <code>smart_upload.php:2</code> .	HIGH	Remove along with <code>ai_extract.php</code> .	LOW
4	<code>admin/dashboard.php:2</code>	<code>\$errorsFirst</code>	Assigned <code>''</code> on line 2, never read or referenced subsequently.	HIGH	Remove unused variable assignment.	LOW
5	<code>admin/dashboard.php:44</code> <code>scanner/index.php:21</code>	Chart.js CDN	Declared script tag present; 0 calls to <code>new Chart()</code> . ECharts is used.	HIGH	Remove <code>chart.js</code> script tags from HTML headers.	LOW
6	<code>scanner/js/parsers/imageParser.js</code>	<code>class ImageParser</code>	Script tag omitted in <code>index.php</code> ; instantiation in <code>scanner.js:10</code> commented out.	HIGH	Include script tag if client OCR needed, or archive file.	LOW
7	<code>scanner/js/scanner.js:9,26,59</code>	Image OCR Blocks	Commented-out code blocks marked <code>[SLATED FOR REVIEW & REVISION]</code> .	HIGH	Remove dead comment blocks or re-enable.	LOW
8	<code>scanner/js/samples.js:96</code>	Sample Invoice Generator	Commented-out method <code>createSampleInvoiceImage()</code> .	HIGH	Clean up dead commented method.	LOW
9	<code>scanner/test/dashboardData.test.js:107</code> <code>scanner/test/integrationLayout.test.js:6</code>	<code>index.html</code> Path	Tests attempt <code>readFileSync('../index.html')</code> which fails with <code>ENOENT</code> (file converted to <code>index.php</code>).	HIGH	Update node test paths to target <code>index.php</code> .	LOW

Category 2: Redundant Code

#	LOCATION	ITEM	ISSUE & EVIDENCE	CONF.	RECOMMENDED ACTION	RISK
1	admin/smart_upload.php:2	<code>\$checks</code> Array	Re-checks <code>CLAUDE_API_KEY</code> , <code>curl</code> , <code>ZipArchive</code> , <code>fileinfo</code> already done by <code>ai_requirements()</code> .	HIGH	Replace inline checks with local system checks.	LOW
2	auth/login.php:18,23 auth/register.php:4	<code>set_old()</code> / <code>clear_old()</code>	Populates <code>\$_SESSION['_old']</code> , but templates never render stored values back into inputs.	HIGH	Wire input values in HTML or remove session writes.	LOW
3	admin/smart_upload.php:76	<code>if (\$msg '')</code>	Evaluating <code> ''</code> with boolean condition is redundant.	HIGH	Simplify expression to <code>if (\$msg):</code> .	LOW
4	config/db.php:4 database.sql:191 savedGraphsTab.js:69	SQL Schemas	Triplicated <code>CREATE TABLE IF NOT EXISTS</code> strings across PHP bootstrapper, SQL seed, and JS export.	MED	Maintain single authoritative database schema source.	MED
5	api/summary.php:9 user/dashboard.php:4	KPI SQL Queries	Both files run identical queries for best global rank, national rank, and entity count totals.	MED	Extract into a shared helper <code>get_observatory_summary_stats()</code> .	LOW

Category 3: Third-Party Dependency Inventory

PACKAGE / SERVICE	PURPOSE	USAGE LOCATIONS	VERDICT
Anthropic API (Claude)	AI document extraction service	<code>includes/ai_extract.php</code>	REMOVE (Paid API; free stack directive)
Chart.js	Client-side charting library	<code>admin/dashboard.php:44</code> , <code>scanner/index.php:21</code>	REMOVE (0 calls; ECharts used)
Tailwind CSS	Utility-first CSS framework	All view header templates	KEEP
Flowbite	UI components (tabs, modals)	All view header templates	KEEP
Font Awesome 6.4.0	Icon set	All view header templates	KEEP
Apache ECharts 5.5.1	Interactive chart visualization	<code>chartEngine.js</code> , <code>dashboard.php</code>	KEEP
JSZip 3.10.1	ZIP archive processing	<code>image0crPipeLine.js</code> (DOCX/XLSX media)	KEEP
SheetJS / XLSX 0.18.5	Excel spreadsheet parsing	<code>excelParser.js</code> , <code>samples.js</code>	KEEP
Mammoth 1.6.0	Word DOCX to HTML converter	<code>docxParser.js</code>	KEEP
docx-preview	DOCX document preview rendering	<code>docxViewerComponent.js</code>	KEEP
PDF.js 3.11.174	PDF parsing & rendering	<code>pdfParser.js</code> , <code>pdfViewerComponent.js</code>	KEEP
Tesseract.js 5	Client-side OCR engine	<code>image0crPipeline.js</code> , <code>imageParser.js</code>	KEEP
Google Fonts (Inter)	Typography font styling	All view header templates	KEEP

Prioritized Cleanup Plan

Phase 1: Quick Wins & Paid API Deprecation (Zero Risk)

- Remove Paid Anthropic Claude API Module:** Delete `includes/ai_extract.php` and route file intake through free local PHP CSV parsing (`smart_map_csv()`) or direct CSV upload (`admin/upload_process.php`).
- Remove Chart.js script tags** from `admin/dashboard.php:44` and `scanner/index.php:21`.
- Delete unused variable** `$errorsFirst` in `admin/dashboard.php:2`.
- Simplify expression** `if ($msg || '')` in `admin/smart_upload.php:76`.
- Fix Unit Test file paths** in `scanner/test/dashboardData.test.js:107` and `scanner/test/integrationLayout.test.js:6` to target `index.php`.

Phase 2: Refactoring & Free Intake Consolidation (Low Risk)

- 1. **Update Admin Ingestion UI:** Update `admin/smart_upload.php` to highlight local CSV/Excel intake and remove references to `CLAUDE_API_KEY`.
- 2. **Form Input Pre-fill:** Wire `old()` values into HTML input attributes or remove unread `set_old()` session writes.
- 3. **Consolidate Summary Queries:** Create a shared `get_observatory_summary_stats()` helper for `api/summary.php` and `user/dashboard.php`.

Phase 3: Browser Scanner Integration (Moderate Risk)

- 1. **Promote Free Browser JS Scanner:** Leverage the existing client-side JS scanner (`scanner/index.php`) which uses 100% free libraries (SheetJS, PDF.js, Mammoth.js, Tesseract.js) as the primary document intake workspace for admins.

Coverage Gaps

- **PHP Runtime Extensions:** Static analysis verified extension check calls, but active PHP runtime configuration (e.g. active `cURL`, `ZipArchive`, `fileinfo`) depends on server environment settings.
